technical and popular report.

Site-specific information was compiled for both historic and prehistoric sites from state agencies in Iowa, Minnesota and Wisconsin, and from various local and regional institutions. More than 1,000 historically or architecturally significant sites and districts and, more than 1,400 prehistoric archaeological components were recorded and plotted on base maps. From the site configurations and from other data collected during the course of the records and literature review, a narrative framework for the interpretation of historic and prehistoric sites was developed. Recommendations to enhance the management of the archaeological and historical data base were provided.

Ten properties occurring in the Pool 8 study area have been placed on the National Register of Historic Places. Seven of the ten are located in the city of La Crosse, Wisconsin. Forty-four archaeological sites are listed in the archaeological site inventory.

INTRODUCTION:

Ten properties occurring in the Pool 8 study area have been placed on the National Register of Historic Places. Seven of the ten are located in the City of La Crosse. Four hundred and eleven sites/structures are listed in the inventory and their locations are portrayed in Figures 1 through 7. It should be noted, however, that the vast majority occur in the City of La Crosse and are identified on the map by a single number (38).

Fourty-four archaeological sites are listed in the archaeological site inventory. Their locations are depicted in Figures 8 through 14. Table 1 represents the identified components at the archaeological sites known to occur in the Pool 8 study area. It should be noted that site distributions are not based on comprehensive systematic survey and thus should not be used for predictive statements. Finally, sites categorized as ineligible, unless specifically noted, means simply that they have not been evaluated in terms of National Register criteria.
